

# 3D Systems' End-to-End Workflow

## **DIGITIZE**

Design up to 80% faster  
with reverse engineering

## **DESIGN**

Create custom and complex  
geometries with 3D design

## **SIMULATE**

Identify and address areas  
for improvement

## **MANUFACTURE**

Gain access to full service  
manufacturing using additive  
and subtractive technologies

## **INSPECT**

Ensure results match expectations  
with non-destructive metrology  
and inspection

## **MANAGE**

Maintain visibility into print job status,  
material levels, preventative maintenance  
opportunities and more

Reverse  
engineering  
with 3D  
scanning  
enables you to  
tackle more projects  
in less time.
